

# Lab: Explore a Simple Generative Tool

**Estimated time needed:** 30 minutes

## Overview

Generative AI models have revolutionized how you interact with technology, enabling you to create new content, generate realistic images, and translate languages with remarkable accuracy.

In this lab, you will gain hands-on experience with a simple generative AI tool, DataRobot, exploring its capabilities and applications.

## Learning Objectives

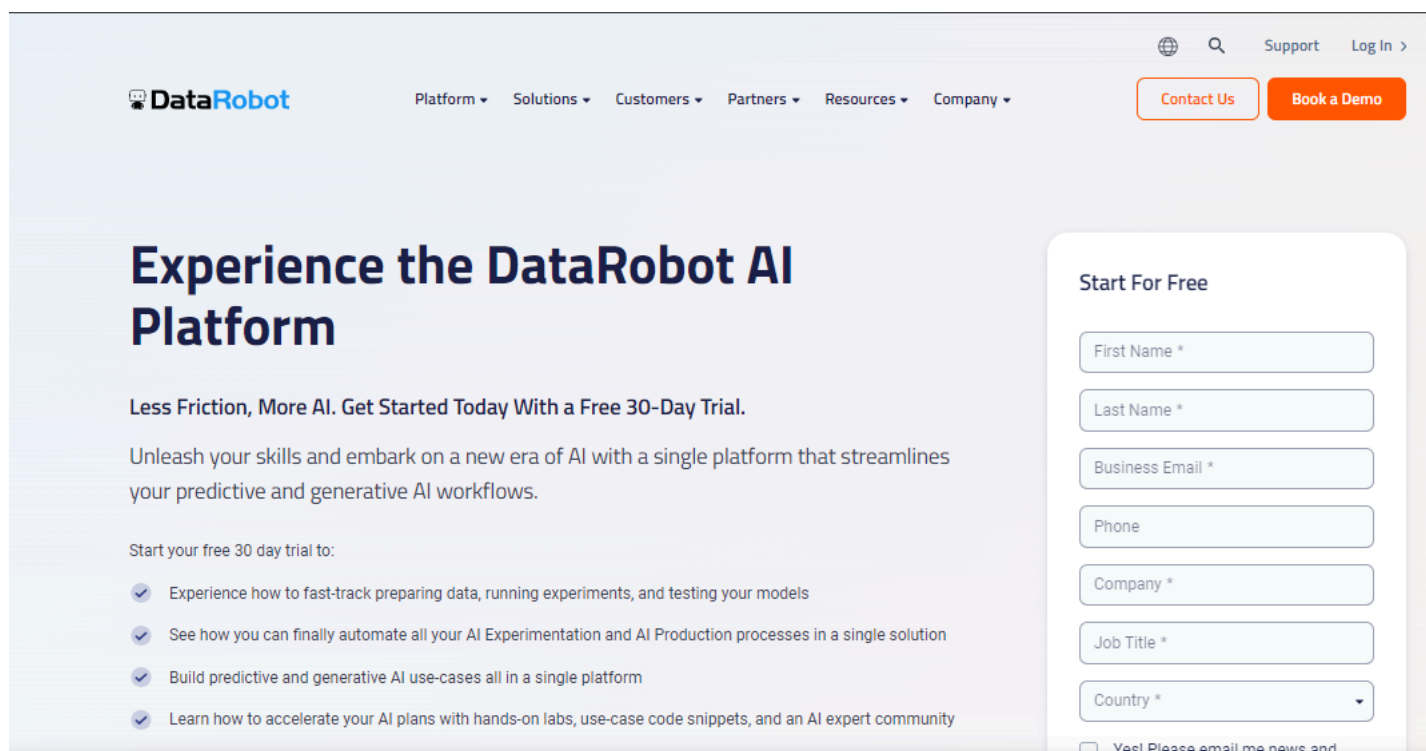

After completing this lab, you will be able to:

- Sign up in DataRobot
- Add a data set to the use case
- Work on model building

## Task 1: Sign-up in DataRobot

Step 1: Click [www.datarobot.com](https://www.datarobot.com)

Step 2: Fill in the required information under the "Start for free" section and create an account.

The screenshot shows the DataRobot website's homepage. The header includes the DataRobot logo, navigation links (Platform, Solutions, Customers, Partners, Resources, Company), and buttons for 'Contact Us' and 'Book a Demo'. The main content area features the headline 'Experience the DataRobot AI Platform' and a sub-headline 'Less Friction, More AI. Get Started Today With a Free 30-Day Trial.' Below this, a list of benefits for the free trial is provided. On the right side, there is a 'Start For Free' form with input fields for First Name, Last Name, Business Email, Phone, Company, Job Title, and Country, along with a checkbox for 'Yes! Please email me news and'.

**Experience the DataRobot AI Platform**

**Less Friction, More AI. Get Started Today With a Free 30-Day Trial.**

Unleash your skills and embark on a new era of AI with a single platform that streamlines your predictive and generative AI workflows.

Start your free 30 day trial to:

- ✓ Experience how to fast-track preparing data, running experiments, and testing your models
- ✓ See how you can finally automate all your AI Experimentation and AI Production processes in a single solution
- ✓ Build predictive and generative AI use-cases all in a single platform
- ✓ Learn how to accelerate your AI plans with hands-on labs, use-case code snippets, and an AI expert community

**Start For Free**

☐ Yes! Please email me news and

**Note:** To access the DataRobot platform, you must sign up using a work email address. If you do not have a relevant work email, an alternative is to create a GitHub account using your Gmail address. Once registered, you can log in to DataRobot using your GitHub credentials.

For step-by-step guidance on creating a GitHub account, please refer to the following link:

[GitHub Account Setup Guide](#)

Step 4: A new window will open; select the relevant option for signing up.

Welcome back to DataRobot

[Reset password](#)

**Sign in**

Step 5: Confirm your email by clicking **Verify Email** in your inbox.

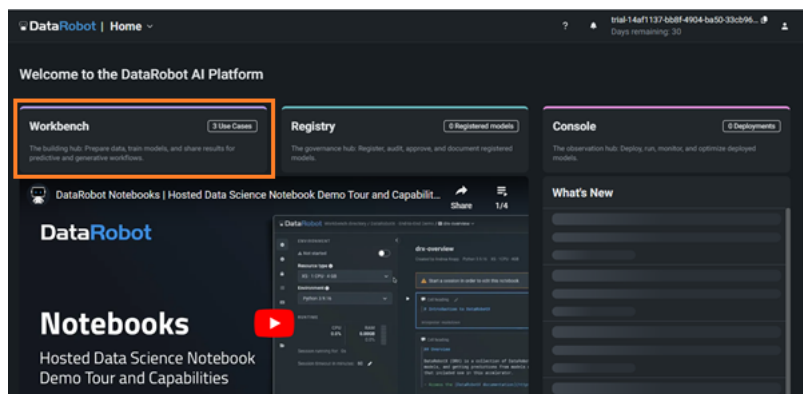

Step 6: Sign up and start your first experience of using the Generative AI tool. The dashboard will look like the image below. You may like to familiarize yourself with the application by clicking **Select a walkthrough**.

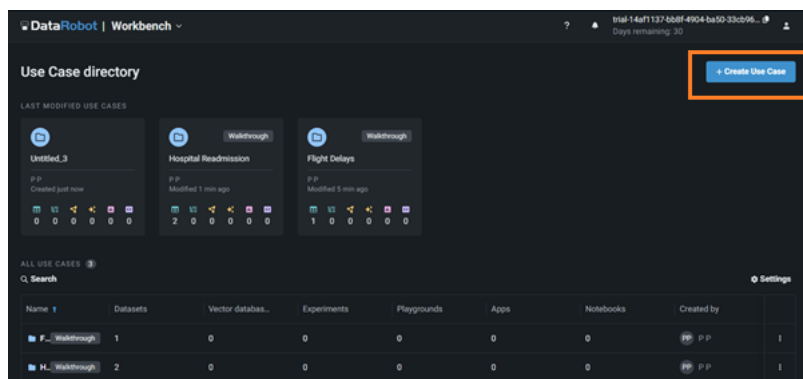

## Task 2: Add a data set

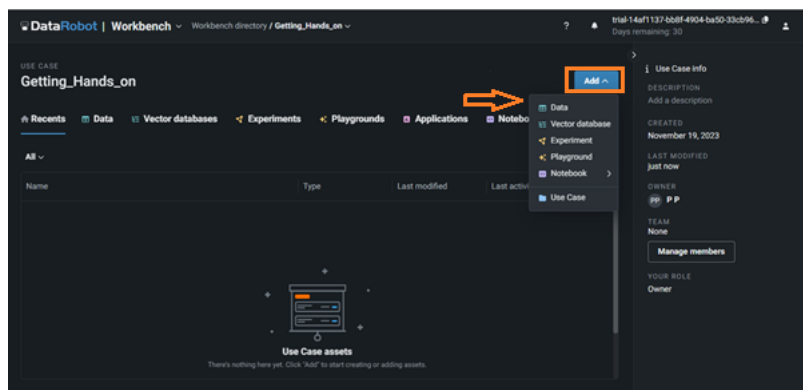

Step 7: The dashboard will appear shortly, and your screen will look as shown below. Click **Workbench**.

Step 8: Click Create Use Case.

Step 9: Click **Add** and **Data** to include the data set in your use case.

Step 10: **Upload** your data set or **Connect** to the data source; however, for this lab, you can select an in-built sample data set *HOSPITAL\_READMISSION\_DATA*.

**Add data**

### Task 3: Work on Data Modeling

Step 14: Click **Start**. You will have options **Modelling** and **Start wrangling**. You can try data wrangling if you want to. For this lab, you will work on model building. Click **Start** and select **Modelling**. It will take a while to prepare a data set for modelling.

## Set up new experiment

Dataset Target Additional settings

**Data partitioning** Time series modeling Preview **Additional settings**

**Partitioning method**  
Select the method for assigning rows to partitions when training models.

Stratified sampling  
Rows are assigned to ensure similar target distribution across each partition.

**Validation type**

☒ Cross-validation  
Trains models on a specified number of folds, maximizing data use but also increasing run time.

☐ Training-validation-holdout  
Splits data into three partitions: trains models on the training set, assess performance on the validation set, and evaluates the model on unseen data in the holdout set.

**Cross-validation folds**  
Enter a value from 2 - 50.

**Holdout percentage**  
Set the subset of data that is unavailable during training and validation. Enter a value

Step 18: Building models will take a while.

The screenshot shows the DataRobot Workbench interface. The top navigation bar includes the DataRobot logo, the 'Workbench' tab, and the breadcrumb 'Workbench directory / Untitled\_4 / HOSPITAL\_READMISSION\_DATA - 2024-07-30 11:23:57'. The left sidebar has tabs for 'Experiment' and 'Comparison'. Under 'Experiment', there are options to 'View experiment info', a 'Filter' (0), 'Validation' set to 'LogLoss', and a 'Search' bar. The 'MODELS' section shows '0/0' models. The main area displays a large circular progress indicator and the text 'Models are building...'. Below this, two model entries are visible: 'Keras Slim Residual Neural Network Classifier using...' and 'Elastic-Net Classifier (L2 / Binomial Deviance)', both marked as 'Building...'.

Step 19: once the modelling is complete, you can pick a model of your choice, and the DataRobot will show the **Model Overview**.

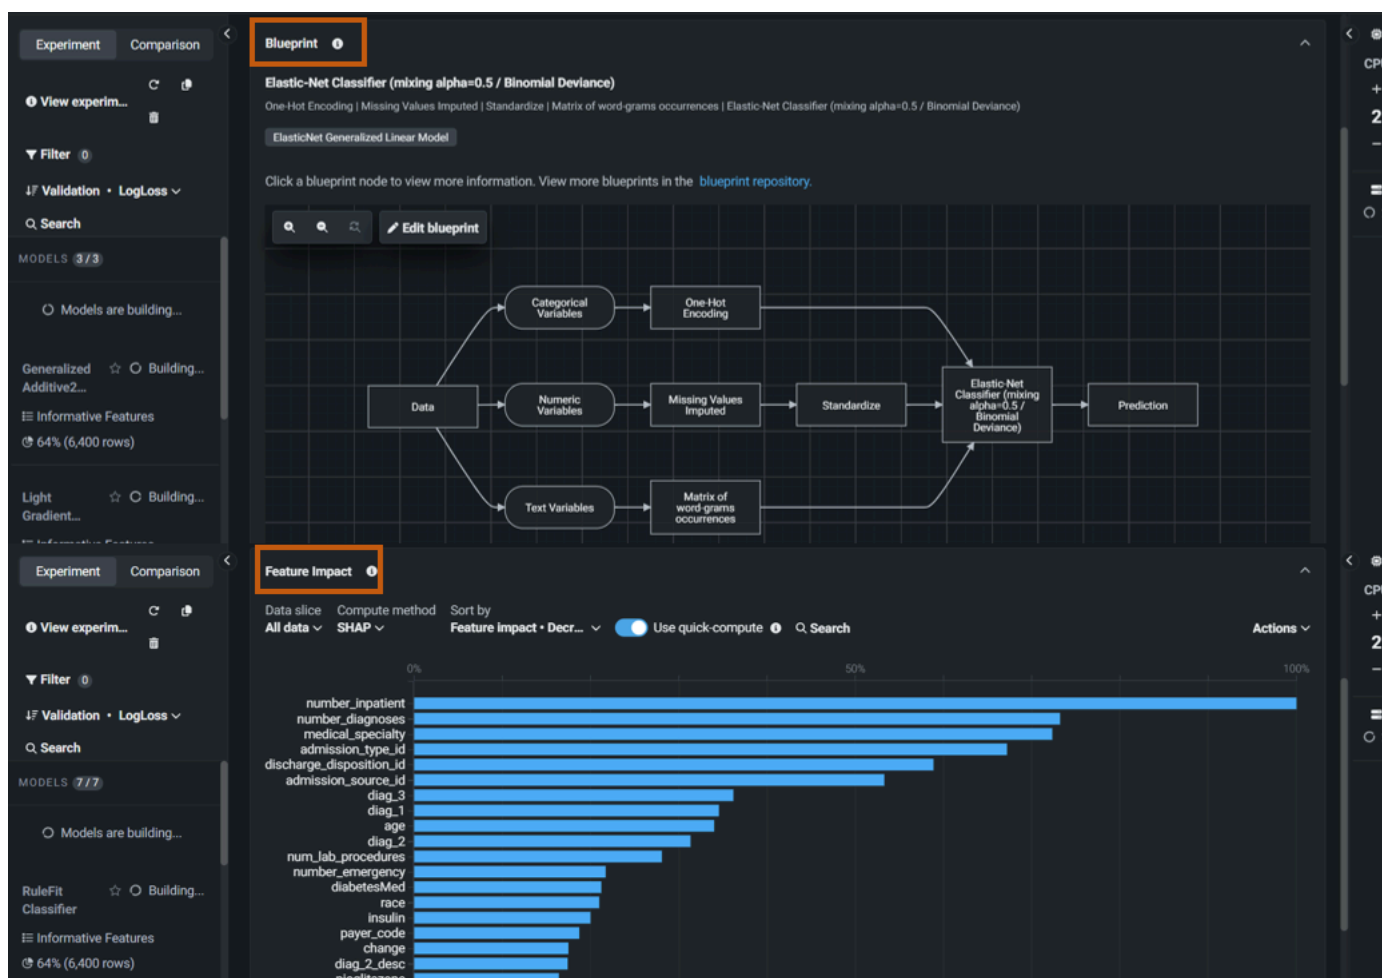

The screenshot shows the 'Model Overview' page for an 'Elastic-Net Classifier (mixing alpha=0.5 / Binomial Deviance)'. The left sidebar is updated to show '3/3' models. The selected model is highlighted with an orange box. The main area displays the model's performance metrics and training settings. The 'Training scores: LogLoss' table shows Validation (0.6089), Cross-validation (Score 0.6111), and Holdout (0.6111). The 'Training settings' table shows Training feature list (Informative Features), Training sample size (64% (6,400 rows)), and Informative Features (64% (6,400 rows)). Below these are sections for 'Blueprint', 'Feature Impact', 'Feature Effects', 'Individual Prediction Explanations', and 'ROC Curve'.

Training scores: LogLoss	
Validation	0.6089
Cross-validation	Score 0.6111
Holdout	0.6111

Training settings	
Training feature list	Informative Features
Training sample size	64% (6,400 rows)

Step 20: You can explore various model overview components like **Blueprint**, **Feature Impact**, and so on.

Step 21: If you have test or unseen data, you can also make predictions by clicking **Make Predictions** under **Model actions**.

The screenshot displays the Elastic-Net Classifier (mixing alpha=0.5 / Binomial Deviance) interface. The **Model Overview** section shows training scores and settings:

Training scores: LogLoss		Training settings	
Validation	0.6089	Training feature list	Informative Features
Cross-validation	<b>Score</b>	Training sample size	64% (6,400 rows)
Holdout	0.6111		

The **Make Predictions** section shows options for making new predictions:

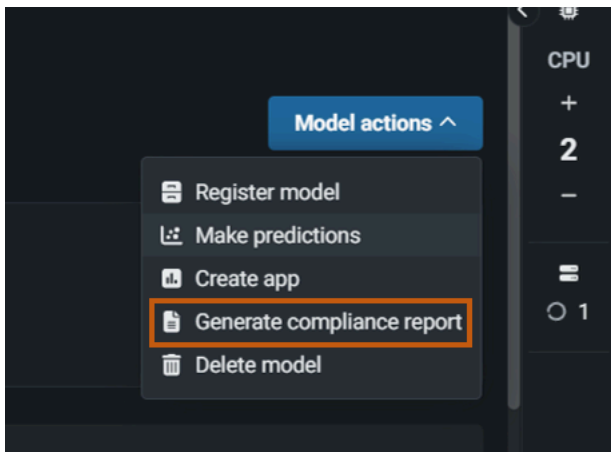

**Prediction dataset**  
Prediction datasets cannot exceed 5.00 GB.

**Prediction options**

- ☒ Include additional feature values in prediction
- ☒ Add all features
- ☐ Add specified features
- ☐ Include Prediction Explanations

**Download recent predictions**  
Predictions are stored and available to download for 48 hours. No recent predictions.

Step 22: You can also click **Generate compliance report** and **download compliance report** for your use case.

## Table of Contents

- 1 How To Use This Document
- 2 DataRobot Model Development Documentation
- 3 Executive Summary and Model Overview
  - 3.1 Model Stakeholders
  - 3.2 Model Development Purpose and Intended Use
  - 3.3 Model Description and Overview
  - 3.4 Overview of Model Results
  - 3.5 Model Interdependencies
- 4 Model Data Overview
  - 4.1 Feature Association
  - 4.2 Data Source Overview and Appropriateness
  - 4.3 Input Data Extraction, Preparation, and Quality & Completeness

## Conclusion

In this lab, you have signed up in DataRobot, added a data set in a use case, and worked on data modelling.
